## Overview

---

Before we move on to our discussion of 15-kilowatt (kW) installations, let's take a moment to discuss something that's not as cool or exciting as solar, but can save you some serious cash in the long run. Installing solar is a great financial decision, but did you know that energy efficiency measures are the most cost-effective.

Now on to solar installations. There are many ways to look at the size of a 15 kW solar installation: .

The average installation cost for residential solar, according to a 2016 report from the National Renewable Energy Lab, is \$2.93 per watt. So if you purchased a 15 kW system in cash, you'd pay \$43,950. Yes, quite a bit of money, but let's see if we can bring that cost down and.

Can a 15kW solar system save you money?

A 15kW solar system has the potential to save you a significant amount of money on your electricity bills. On average, this system can save up to \$4,654 per year. Over the 25-year lifetime of the solar panels, you can expect to save a total of \$116,344. The cost of electricity has been steadily increasing over the past four decades.

How much power does a 15kW solar system generate?

The 15kW solar system would be generating an average of 60kWh of power daily. A 15kW Solar system is usually paired with 40 to 50 Solar panels (depending on the wattage of the Solar panels offered; you only need 40 of the 370w Solar panels to get 15kW) and either a 10kW or 15kW inverter.

What is a 15kW solar system?

The 15kW Solar system is a fairly big generation unit, heavily suited towards commercial establishments; It can be suitable for residential clients as well provided you have have roof space and consistently high power usage patterns. The 15kW solar system would be generating an average of 60kWh of power daily.

How much space does a 15kW solar system take up?

A 15kW solar system with 50 panels will occupy an area of approximately 850 square feet. It is essential to consider this space requirement when planning the installation of your solar system. How Many kWh Does a 15kW Solar System Produce?

(Load Per Day) On average, a 15kW solar system can produce around 75 kWh of electricity per day.

How much does a 15kW solar system cost?

With a 15kW solar system, any excess electricity that you generate but don't use can be sold back to the grid. This means that you can earn money from the power you produce. With current electricity costs, you can expect a 20% return on your investment per year. The typical cost for a 15kW solar system is around \$30,000.

How many solar panels do you need for a 15kW solar system?

A 15kW solar system typically consists of around 35 to 40 solar panels, depending on the wattage of each panel. In Australia currently an average size solar panel is between 390 Watts to 440 watts. For example, if I am using a 440W solar panel, then I will only require 35 solar panels to achieve a system size of 15000W or 15kW.
