

A captive company strategy is becoming another firm's sole

Overview

It is a strategy that is pursued when a firm sells the bulk of its products to one customer (wholesaler/ dealer), who in turn performs some of the functions commonly done by an independent firm. The primary shortcoming of this strategy is that the organization is restricted by the actions of its captor. Does a captive finance subsidiary affect firm's competitiveness?

We investigate how a formation and maintenance of a captive finance subsidiary affects firm's competitiveness. We find that firms with captive finance subsidiaries have higher profitability, larger market share, lower sales volatility, and keep lower cash balances.

How does a captive affect a firm's competitiveness?

Additionally, the presence of a captive helps a firm smooth its sales volatility (7.02% lower sales volatility) and allows to keep lower cash balances (3.20% lower cash holdings). Next, we investigate changes in a firm's competitiveness following the establishment of a captive.

Does establishing a captive increase firm's market share?

In Table 10, Panel C we find that establishment of a captive helps to increase firm's market share. Similar to findings on profitability, this however does not happen instantly - it takes about four years for the market share gains to become economically and statistically relevant.

What makes a captive company different from a multinational company?

This places captive companies in a unique position relative to multinationals. Finally, captive companies are distinguishable in that, because of their role within communities, they are often much closer to human rights violations (and are more likely themselves to be subject to human rights violations) than others.

Does establishing a captive improve profitability?

All controls are measured as of the end of year t . It is interesting to observe that establishment of a captive by a sample firm also improves profitability of competing firms which already had captives in place. Likewise, this improvement in profitability is gradual and becomes economically and statistically meaningful after about four years.

Are captive companies more correlated with finance industry returns?

Since the provision of financial services to customers constitutes a significant part of a captive parent company's activity, we would expect that the stock returns of firms with captives are more correlated with finance industry returns than the stock returns of companies without financial subsidiaries.

A captive company strategy is becoming another firm s sole

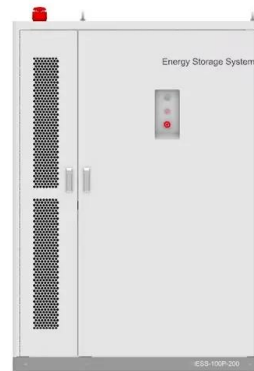

Retrenchment Strategy
