## Overview

---

What is a 3.6 volt battery?

Why 3.6 V?

The 3.6V rating isn't just a random number; it stems from the chemistry within the lithium cells. Lithium-ion batteries typically have a nominal voltage range of 3.6V to 3.7V. However, 3.6V batteries are engineered to offer a sweet spot between power and size.

What is a 1/2 AA battery?

1/2 AA Batteries [3.6V AA Lithium Batteries] ([/ web/c/batteries-chargers/non-rechargeable-batteries/aa-batteries/?](#)

[applied-dimensions=4294819745,4294833720](#)) AA batteries are used in everyday life and are one of the most frequently used power cells in the market today.

Are lithium AA batteries good?

Lithium AA batteries are ideal for more robust shorter-term use in high-drain equipment such as digital cameras, or even better in low-drain devices that need to be powered for long periods of time like smoke alarms. AA lithium cells can last longer than most other AA types in devices and don't leak over time, unlike many cheaper varieties.

What voltage is a lithium ion battery?

Lithium-ion batteries typically have a nominal voltage range of 3.6V to 3.7V. However, 3.6V batteries are engineered to offer a sweet spot between power and size. They provide ample energy while maintaining a compact form factor, making them ideal for a variety of applications. Why not 3.5V or 3.7V exclusively, you ask?

Which AA battery should I use?

Alkaline batteries are the most common and best-known type of AA battery. The main advantage of a standard, non-rechargeable AA alkaline battery is that it's immediately available, very cost-effective in the short-term and suitable for a range of low drain devices.

How long does a lithium AA battery last?

Long-life lithium AA batteries are another popular battery, providing up to 9 years of use. Lithium AA batteries are ideal for more robust shorter-term use in high-drain equipment such as digital cameras, or even better in low-drain devices that need to be powered for long periods of time like smoke alarms.
