What is a lead-carbon hybrid system?

Lead-carbon hybrid systems (LCHSs) Lead-carbon hybrid systems are prominent power delivery devices that offer an alternative to commercially available LABs. LCHSs deliver more power ($>10 \text{ kW kg}^{-1}$) and provide a prolonged cycle life ($>100,000$ cycles) compared to LABs. They consist of faradaic and non-faradaic charge exchange components.

Can a partial state-of-charge (pSoC) operation damage a lead-acid battery?

This partial state-of-charge (PSoC) operation can be damaging for lead-acid batteries as it leads to irreversible sulfation of the negative plates and methods to overcome this problem have been the subject of intensive development , . Sustainability is one of the most important aspects of any technology and lead batteries are no exception.
