What fuel made from the sun could do for the planet

Solar energy helps power a reactor that turns water and carbon into liquid hydrocarbons. The first step is acquiring a carbon source. One possibility is to remove carbon dioxide

Geothermal Energy

Geothermal energy is heat that is generated within Earth. (Geo means "earth," and thermal means "heat" in Greek.) It is a renewable resource that can be harvested for human use. About 2,900 kilometers (1,800 miles) below Earth's crust, or surface, is the hottest part

Renewable Energy

An energy source that does not get used up is called renewable energy. The wind, the sun, and heat from Earth are sources of renewable energy. Solar Energy Solar energy comes from the sun. Active solar energy uses special technology to capture the sun's rays. uses special technology to capture the sun's rays.

Technology: Powering the future of energy
