

Air cushion photovoltaic bracket

Overview

Does ETFE cushion roof collect thermal energy?

For air temperatures, TD between air inside and outside of ETFE cushion roof were 19.8 °C and 26.5 °C, showing that ETFE cushion roof could provide a way of collecting thermal energy. Summer TD between air inside and outside of ETFE cushion roof was 6.7 °C more than winter TD.

Are ETFE cushion structures suitable for cladding?

Generally, ETFE cushion structures are suitable for roofs and claddings of greenhouse buildings and large-span stadiums where adequate sunlight level and good thermal performance are necessary .

What is the air temperature inside ETFE cushion roof?

Air temperature inside ETFE cushion roof could be utilized as follows. In winter, average temperature of 30 °C could be ventilated into rooms to replace parts of air-conditioning based on occupants' satisfaction . In summer, average temperature of 65.1 °C could be used to heat water for domestic use.
