

Australia solar energy council

Overview

What is the Australian Energy Council (AEC)?

The Australian Energy Council is the peak industry body for electricity and downstream natural gas businesses operating in the competitive wholesale and retail energy markets. AEC members generate and sell energy to 10 million homes and businesses and are major investors in renewable energy generation.

How many solar jobs are there in Australia?

The study found that more than a third of renewable energy jobs in 2019 were in the small-scale solar segment, with 37 per cent of the clean energy workforce involved in installing solar on the rooftops of Australian homes and businesses.

How many rooftop solar installations are there in Australia?

By the end of the first half of this year, solar PV installations had been fitted to more than 3.85 million Australian rooftops with a capacity of 23.65 GW, according to the Clean Energy Regulator. In addition to the latest installation statistics, we take a look at other developments with rooftop solar, as well as utility-scale batteries.

How big is Australia's solar energy sector?

However, the 117 MW installed throughout 2020 was still the second-best year for medium-scale solar, and the size of the sector has more than doubled over the past two years so that it now contributes 1.4 per cent to Australia's total renewable energy generation.

How many people use rooftop solar in Australia in 2023?

2023 also saw rooftop solar continue to shine brightly, with 3.1 GW of new capacity added to Australia's energy system. In total, 337,498 households and businesses around Australia installed rooftop solar, up from 315,499 in 2022.

“Rooftop solar accounted for 28.5 per cent of all renewable generation nationally over the past year.

Why did Australia add 117 MW of solar capacity in 2020?

The medium-scale solar sector added 117 MW of new capacity in 2020, which was a strong result considering the impact that the COVID-19 pandemic had on the Australian small business community.
