

# **Average VRFB energy storage price per 30MW in Czech**

## Overview

---

Is the Czech Republic ready for pumped-storage hydroelectric power plants?

Bulk energy storage is currently dominated by hydroelectric dams, both conventional as well as pumped. There are six localities considered for new pumped-storage hydroelectric power plants in the Czech Republic but public acceptance presents a challenge. Front-of-meter installations in the Czech Republic are mired in regulations.

How do customers book gas storage facilities in the Czech Republic?

Customers using gas storage facilities in the Czech Republic book: Storage capacity, injectability, and deliverability with the storage system operator for gas delivered to and from the storage facility. Bookings are made in auctions organized by the applicable storage system operator.

Why is Czech energy-accumulation so expensive?

According to the report, the main reason is the regulatory framework biased in favor of classical energy models. The Czech Republic is no exception. It is fair to say that none of the available energy-accumulation technologies is perfect yet, and cost-effectiveness can be reached under specific conditions only.

What incentives are there for onsite generation in the Czech Republic?

At the same time, stakeholder and regulatory pressure encouraged Czech organizations to invest in renewable power. There are several EU incentives to spur the growth of onsite generation. For example, the Modernisation Fund supports investments in energy efficiency, storage, network upgrades and the re-skilling of workers.

When will the price of gas storage facilities be set?

Both the firm and variable price component for gas storage facilities for 2026 will be set by the Energy Regulatory Office in the new price decision in November 2025. NET4GAS is the exclusive gas transmission system operator in the

Czech Republic.

Why are Czech businesses investing in renewable projects without subsidies?

The subsidy increases to cover up to 75% of costs for community projects. But what we noticed at Wattstor is that Czech businesses are investing in renewable projects even in the absence of subsidies, because they have realised the strong business case for generating clean energy on site.
