

# Average microgrid storage price per 3MW in Netherlands

## Overview

---

How much does a microgrid cost?

Or as S&C Electric's David Chiesa puts it: "If you've seen one microgrid, you've seen one microgrid." So there is no quick and simple price to give a prospective customer. Sources we've interviewed cite project proposals as low as \$250,000 to as high as \$100 million. Generation typically accounts for most of the cost.

Which factors influence the cost of microgrids?

Several factors, including generation choice, battery size, and interconnection upgrades, influence the cost of microgrids. However, there are ways to manage these factors to ensure microgrid projects can move forward with satisfied customers, as discussed in the Microgrid 2021 conference session called "Why Does a Microgrid Cost What It Costs?"

".

Are grid managers allowed to buy energy in the Netherlands?

Grid managers are not allowed to buy energy on the market themselves in the Netherlands. Examples of regional grid managers are Liander and Stedin. entrepreneurs who want to become active across borders. Prohibits the placing on the market of certain batteries manufactured with mercury or cadmium. Encourages the recycling of (parts of) batteries.

How much does a grid connection cost?

The complexity of grid connection requirements varies significantly based on location and local regulations, with costs ranging from €50,000 to €200,000 per MW of capacity. System integration expenses cover the sophisticated control systems, energy management software, and monitoring equipment essential for optimal battery performance.

Should banks invest in microgrids?

With solar prices below 20 cents/W and lithium-ion batteries under \$200/kWh, it is possible for microgrids to cost effectively deliver energy in the countries where Husk operates, according to Sinha. However, Sinha noted that microgrids are not yet appealing to banks.

Is a microgrid more expensive than a small solar array?

True, larger microgrids will likely be more expensive than smaller microgrids — but in gross terms, not necessarily on a per kilowatt basis. In fact, generation for a very small microgrid tends to cost more per kilowatt than a comparable larger version. For example, a 50-kW solar array is more expensive per kilowatt than 1-MW solar array.
