

Average mobile ESS unit price per 200MW in Mexico

1075KWHH ESS

Overview

How much does a MWh system cost?

MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW / 4 MWh BESS has four hours of storage capacity. So, while the system might be \$200,000 per MW, the effective cost can be \$800,000 per MWh if it has four hours duration.

Why did Modo Energy Survey the battery community?

Because of this, Modo Energy surveyed the battery community - to produce this battery cost benchmark. If you finance, own, or develop battery energy storage systems, you can use this data to support procurement and sense-check financial models. To produce this benchmark, Modo Energy surveyed various market participants in Great Britain.

How much does Bess cost in China?

It is nonetheless still eye-opening to note just how big those differences in cost are. The average for a turnkey system in China including 1-hour, 2-hour and 4-hour duration BESS was just US\$101/kWh. In the US, the average was US\$236/kWh and in Europe US\$275/kWh, more than double China's average cost.

What if LCoS was reduced 155 US\$/MWh?

For thermal storage, the reduced LCOS of 155 US\$/MWh could not compensate for the reduction in revenue due to energy lost through the assumed thermal storage efficiency of 50%. This was true for the Pessimistic, Realistic and Optimistic case.

How much does a power plant cost per MW?

This value is in line with typical market conditions worldwide, where the contracted operation of such services is typically between 150,000 USD and

400,000 USD (3 to 8 million MXN) per MW and year.

Can Bess be used for long-term auctions in Mexico?

Financial modeling and sensitivity analysis of the three selected BESS technologies. Chapter six analyzes the feasibility of operating BESS as part of Long-term Auctions in Mexico based on the services that these systems are able to provide and, on the auctions' legal and regulatory framework.
