Our widely used prices are market-reflective, assessing both the buy- and sell-side of transactions. Trade with relied upon price data that is unbiased, IOSCO compliant and used across energy markets.

This includes benchmark prices for lithium and cobalt, two battery materials that continue to experience market volatility and supply/demand imbalances. Our widely used prices are market-reflective, assessing both the buy- and sell-side of transactions. Trade with relied upon price data that is.

For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in 2022 to about \$30,000 in 2024. Similarly, the price for lithium carbonate has fallen from a high of approximately \$70,000 per metric ton to well below \$15,000 in 2024. This article focuses primarily on two of the.

The latest data based on EV registrations in over 110 countries show the sales weighted average monthly dollar value of the lithium, nickel, cobalt, manganese and graphite contained in the batteries of the average EV based on global end-user registrations, battery capacity and chemistries. Put it.

Data analyzed from over 110 countries indicates that the average monthly value of lithium, nickel, cobalt, manganese, and graphite in standard EV batteries continues to decline. As prices for natural and synthetic graphite, lithium carbonate and hydroxide, and nickel, cobalt, and manganese sulfate.

As natural and synthetic graphite, lithium carbonate and hydroxide, and nickel, cobalt and manganese sulphate prices decline further, the raw materials bill for the average EV is now down to \$510 compared to \$918 in October 2023 and a monthly peak of more than \$1,900 at the beginning of last year.
