The BNEF study that posited that figure, in 2022, anticipated an average battery cost of \$214/kWh of storage capacity in 2023 but the actual cost for that year was \$139/kWh. Battery costs are expected to fall to an average \$99/kWh in 2032. Brazil has 300 MW to 400 MW of batteries and the LRCAP.

Sodium is 1,180× more abundant than lithium in Earth's crust and costs just \$0.05/kg vs. \$15/kg for lithium. This translates to 20-30% lower cell production costs compared to LFP lithium batteries. For Brazil, where currency volatility impacts imports, locally sourced sodium enables predictable.

Brazil Sodium-ion Battery Market is gaining traction as an emerging alternative to lithium-ion batteries, offering benefits of cost-effectiveness, abundant raw materials, and improved safety profiles. Ongoing innovations in cathode and anode materials are enhancing the energy density and cycle life.

The battery storage business is still in its infancy in Brazil, and no comprehensive rules governing the deployment of such technologies exist – either for utility-scale or small-scale projects. So far, only a few projects or businesses have been disclosed, namely: (i) ISA CTEEP, with batteries.

A study by Brazilian consultancy Greener has indicated that the country installed 269 MWh of energy storage capacity in 2024, growth of 29% from 2023. Demand for battery energy storage system (BESS) components grew 89% in Brazil from 2023 to 2024 and most of the resulting systems are likely to be.

The auction, to take place in June 2025, will include 300MW energy capacity purchase that could drive an estimated \$450m in investments from winning bidders, according to consultants Oliver Wyman. Combine business intelligence and editorial excellence to reach engaged professionals across 36.
