

Average standalone energy storage price per 20kWh in Greece

Overview

While Greece currently has virtually no utility-scale battery storage capacity installed, the country's project pipeline points to explosive growth in the coming years.

While Greece currently has virtually no utility-scale battery storage capacity installed, the country's project pipeline points to explosive growth in the coming years.

Starting in May 2023, Greek households and farmers are able to apply for public funds to cover the purchase and installation of small solar+storage systems up to 10.8kW (featuring up to 10.8kWh of storage). The grants can cover up to 75% of total cost of a system.¹⁰ The total budget available is.

The average subsidy price in the third auction exercise came at €52589.16/MW/year. The lowest successful bid stood at €43927/MW/year, concerning a 25 MW/100 MWh project in the Western Macedonia region. The highest awarded subsidy came at €58773/MW/year and refers to a 7.9 MW/31.6 MWh project.

A new ministerial decree sets the framework for the installation of 3.55 GW of energy storage – standalone batteries, without subsidies. The new framework for batteries, presented by the Ministry of Environment and Energy, is under public consultation. It drastically increases the ambition.

A draft ministerial decision envisages the installation of 3.55 GW of standalone battery energy storage systems which will be granted priority connection to the transmission or distribution grid and operated on a merchant basis without subsidy support. From ESS News The Greek Ministry of Energy and.

Currently there are four (4) storage plants operating in Greece, two open-loop pumped-hydro storage (PHS) stations in the mainland (700 MW in total) and two small hybrid RES-storage stations in non-interconnected islands (just 3 MW). The updated target for a renewable energy source (RES) share of.

Supply Charge – The actual cost of energy (can be fixed or variable). Network

Charges – Regulated fees for using transmission and distribution lines. Public Service Obligations (PSOs) – Costs to support islands, renewable energy, and vulnerable consumers. Taxes – Including VAT (24%), excise tax. Should Greece invest in energy storage facilities?

Currently there is a growing interest for investments in storage facilities in Greece. Licensed projects mostly consist of Li-ion battery energy storage systems (BESS), either stand-alone or integrated in PVs, as well as PHS facilities .

Does Greece have a battery storage subsidy program?

Greece's latest auction has awarded subsidies to 188.9 MW of standalone, front-of-the-meter, utility-scale battery energy storage. The auction was the third and final edition of a battery storage subsidy program launched in 2023, with the country now turning its focus towards a new 4.7 GW unsubsidized BESS scheme.

Will Greece install 900 MW of storage by 2030?

According to the Greek National Energy and Climate Plan (NECP), the nation aims to install 4.3 GW of storage by 2030. Thus far, 900 MW has been allocated via the Greek Regulatory Authority for Energy, Waste, and Water (RAAEY) tenders. Therefore, the remaining share would be delivered under the new plan but without any subsidy support.

How long should energy storage be in a Greek power system?

Considering the energy arbitrage and flexibility needs of the Greek power system, a mix of short (~2 MWh/MW) and longer (>6 MWh/MW) duration storages has been identified as optimal. In the short run, storage is primarily needed for balancing services and to a smaller degree for limited energy arbitrage.

How many storage plants are there in Greece?

Currently there are four (4) storage plants operating in Greece, two open-loop pumped-hydro storage (PHS) stations in the mainland (700 MW in total) and two small hybrid RES-storage stations in non-interconnected islands (just 3 MW).

How much power will Greece have by 2030?

The government now aims for 2.65 GW of battery projects on the transmission grid and a further 900 MW on the distribution grid. According to the Greek National Energy and Climate Plan (NECP), the nation aims to install 4.3 GW of storage by 2030.
