

BESS cost vs benefit calculation in Tunisia

Overview

What are the benefits of Bess?

More efficient applications could delay equipment capacity upgrades, improve equipment utilization, save costs, and increase the system hosting capacity for renewable energy. However, the application of BESS is restricted by its high cost and limited policy support.

How much does Bess cost?

The cost of BESS has fallen significantly over the past decade, with more precipitous drops in recent years: This is nearly a 70% reduction in three years, owing to falling battery pack prices (now as low as \$60-70/kWh in China), increased deployment, and improved efficiency.

What factors affect the cost of a Bess system?

Several factors can influence the cost of a BESS, including: Larger systems cost more, but they often provide better value per kWh due to economies of scale. For instance, utility-scale projects benefit from bulk purchasing and reduced per-unit costs compared to residential installations. Costs can vary depending on where the system is installed.

Is there a reliable improvement benefit calculation model for Bess?

3) A reliability improvement benefit calculation model of BESS was built, and the present study proposes a detailed calculation flow of economic evaluation model for BESS users considering net present value (NPV) index and dynamic payback period (DPP) index.

What is the difference between Bess lifetime and Bess CAPEX?

In simulation 1, α d e g is set to 0, i.e., 25 years BESS lifetime is considered. In contrast, in simulation 2, the lifetime of the BESS is determined considering the operation pattern of the system. Thus, the BESS CAPEX includes, apart from the investment cost, the replacement cost.

Does Bess reduce the cost of conventional power generation?

The literature (Li and Hedman, 2015) establishes an economic evaluation model for BESS with high penetration of renewable energy. The average cost of conventional generation is reduced when the system is connected to BESS, and BESS can increase the utilization of conventional power generation in the system.
