Chances are, we have the right solution for you. EcoFlow is a portable power and renewable energy solutions company.

Who needs backup power?

Backup power isn't just for one type of person, business, or institution. A large and diverse group of power users need reliable backups to keep the juice flowing, even when their regular power systems are down. At the top of the list are the businesses or other organizations that simply can't go without power, even briefly.

How do I create an effective electrical power backup plan?

The first step in creating an effective electrical power backup plan is to identify your specific power needs. This involves determining which appliances and systems are essential for your home or business to function during a power outage.

What is a business backup power supply?

An uninterruptible power supply (UPS) is the most popular business backup power supply option, depending on your power requirements. This invaluable piece of business apparatus helps to prevent power interruptions by providing emergency power to your equipment. Below we explore what a UPS is and the 3 different types of UPS.

Why do I need a back-up Power Plan?

Power for your home and/or business is indispensable for protecting your family, your clients and your property. Losing power in an emergency can be devastating. That's why you must initiate a back-up power plan for your home

or business. Many different styles of back-up power are now available.

How do I choose a backup power system?

Determine power requirements, what type of backup power does the job most efficiently, and then invest in a quality backup system. Backup Generator: Any generator used to supply power during an outage or blackout. Standby Generator: Fully automatic startup. Power a home or business for days or weeks in any weather, including hurricanes.
