

Bahamas solar power

Overview

The Islands Energy Program team hasn't found an instance yet "where importing natural gas, diesel, propane or other fossil fuel for power generation is cheaper than the combination of solar plus storage or other renewable energy systems," Burgess highlighted. "Solar really is the least-cost option in the Bahamas today.

Three pillars support the program. The first is strategic planning that enables island governments, private and public-sector enterprises to undertake national clean energy transition programs.

Those characteristics led Shell to propose investing very large sums of capital to build out a 220-250-MW natural gas power plant. "It's still early days. There's no PPA [power purchase.

The Bahamas set to aggressively expand its use of solar energy ...

Currently, solar power makes up less than 1% of all energy generated in The Bahamas. Oil is responsible for nearly all power generation with a 99% share of electricity production. This reliance on oil places The Bahamas well behind many countries globally and regionally when it comes to green energy and renewable power generation.
