

Bequiet system power 7

Overview

Is bequiet a good power supply?

BeQuiet's new Straight Power E10 800 watt unit is a really solid performing power supply. It's not the best in the world at what it does, but it is more than good enough to compete against most of the units on the market and win. And the price isn't half. We would like to thank be quiet! for supplying the review sample.

Is the bequiet system power 9 600W good?

The BeQuiet! System Power 9 600W power supply uses solid build quality and a decent 120mm fan to reduce its noise profile. The output is plenty for any current gaming system and four PCIe outputs on the 600W version ensure you can even run a pair of GPU's if you need to - indeed they have opted for a dual 12V rail design to facilitate this.
