

Bowling power systems

Overview

How can fast bowlers improve their bowling skills?

Fast bowlers need to take it back to basics. Train to get faster and move that top end speed, which subsequently allows the slower/variation balls to be more effective and have the capacity to recover and do that skill over and over again.

How does GPS work in Bowling?

GPS splits workload into 3 VELOCITY bands, which correlate with the energy system categories. Based on these I split bowling into 3 bioenergetic sessions. These can be done as the skill of bowling itself or running-but has to be running.

Why is bowling so important?

By bowling frequently you'll optimize technique and coordination (intramuscular and intermuscular). The combination and appropriate training of all three-performance zones plays a pivotal role in improving and maintaining the necessary optimal performance needed by every fast bowler.

Do bowlers have to be bowling all year?

Bowlers have to be bowling all year. There cannot be a phase of more than 4 weeks when the skill of fast bowling isn't practiced. However there needs to be a different focus with the energy systems at the heart of all programme designs. Session volume, intensity, the surface and frequency need to be managed accordingly.

Do bowlers have to run?

Bowlers have to run. Like strength, power and speed work it needs to be transferable. I'm a "cycling for bowlers free coach"- serves no purpose for me as a fast bowling coach and actually is another knee dominant activity like squatting that grooves an inefficient motor pattern to bowl quickly.

What is Blue Star Power Systems?

Blue Star Power Systems, Inc. are a company whose equipment is the best in the industry, but the relationships developed with them are even better, according to John Bowling, Company Founder of Bowling Power Systems, Inc. The owners of Blue Star Power Systems are Clark, Clayton, and J. J. Costello.
