Bringing distributed energy storage to market

Analysis of Energy Storage Participation Policies in an Electricity

As an essential technology to solve renewable energy absorption, energy storage plays a vital role in the new power system. However, the cost recovery of energy storage is complex, and government subsidies are still needed at this stage. To save government investment and improve the economic benefits of energy storage, the authorities need to choose an appropriate ...

Control strategy of distributed energy storage participating in power

Under power market, distributed energy storage (DES) can participate in market transaction and make use of price fluctuation. However, individually accessing every DES to the power dispatch center results in the problem of high cost and low efficiency. Therefore, this paper proposes that the control strategy of distributed energy storage participating in power market transaction. ...
