Overview

What percentage of Burlington's electricity comes from solar?

Just over 1 percent of Burlington's electricity came from solar last year. The city's reliance on wood and water allows it to sidestep some of the infrastructure headaches that can come with solar and wind. Electricity grids were built to facilitate a constant flow of energy from fossil-fueled power plants.

What percentage of Burlington's energy is renewable?

In 2004, only 25% of Burlington's energy came from renewable sources. However, just 10 years later, the city had achieved 100% renewable energy. What changed?

.

Where does Burlington's electricity come from?

Over 30 percent of Burlington's electricity comes from burning wood, much of it waste leftover from the region's logging industry. Another 40 percent comes from hydropower, which made Burlington the first city to run on 100 percent renewable electricity in 2014. Wind provides another 25 percent.

Is Burlington Vermont running on renewable electricity?

Burlington, Vermont has been running on renewable electricity since 2014 By Justine Calma, a senior science reporter covering climate change, clean energy, and environmental justice with more than a decade of experience. She is also the host of Hell or High Water: When Disaster Hits Home, a podcast from Vox Media and Audible Originals.

Does Burlington offer a building permit fee for solar panels?

In an effort to encourage the installation of residential solar panels, the City of Burlington is now offering grants for the building permit fee for residential

solar panels installed on rooftops for the remainder of 2024. This would be a savings of \$594.

Does Burlington need an energy credit?

Although Burlington has not needed an energy credit, if it did, it would come from ISO-New England as well, in the form of renewable energy. “We try to be a bit conservative in our planning, and to have more than 100% renewable energy,” Springer says. The biomass-fueled McNeil Generating Station has been operating for more than 35 years.
