What is Spain's energy storage strategy?

zing the economy by the end of 2050. To increase stability and flexibility in its network as it decarbonizes its energy sector, Spain announced an Energy Storage Strategy (PDF) (March 2022) aimed at developing 20 GW of storage capacity by 2030 and 30 GW by 2050. In 2021, Spain announced plans to invest a total of \$4.6 billion (EUR4.3 billion) by.

How much energy storage will Spain have in 2022?

casted to grow to 353,880MW by 2030. Spain had 88MW of capacity in 2022 and this is expected to rise to 2,500MW by 2030. In the past few months Spain has announced a 2.5GW energy storage target by 2030 and Portugal is hosting a tender with a significant add-on option for storage, but . Statkraft argues that energy storage is essential to.

Why are battery storage options more suitable in Spain?

As a result, shorter duration storage options like batteries are more suitable in Spain. In Spain, over 50% of excess renewable energy occurs in periods where there is continuous excess for less than 12 hours i.e. a battery that chooses to charge on this energy would be able to discharge within 12 hours.

Is combining solar and storage a good idea in Spain?

This variability, combined with Spain's excellent solar resources, make the economics of combining solar with storage increasingly favorable. The market

for utility-scale batteries has been almost non-existent until recently as the market has lacked a clear policy and regulatory framework.

How much does a LCoH cost in Spain?

This is comparable with the 67 €/MWh LCOH for the TES with retail charges. In Spain, subsidies for storage will be granted through four calls under the PERTE ERHA1 scheme. The PERTE ERHA includes storage, renewables and hydrogen and it is funded by the European Union
