

Calculation of the slope of photovoltaic support

Overview

The latitude angle or the latitude of a location is the angular location north or south of an equator and its equal to $(-90^\circ \leq \phi \leq +90^\circ)$.

It is inclination angle of the sun west or east from the equator due to rotation of the earth on its axis at 15° per hour. The declination angle varies from $+23.45^\circ$ in 21 of June to -23.45° in 21 of December.

Displacement angular of the Sun east or west from the local meridian (Kaddoura et al. 2016), and it is equal to α (Rajput and Gwalior (2017)).

Altitude angle represents the angle between the falling solar radiation and the horizontal plane of the Earth's surface, the azimuth angle represents the horizontal angle enclosed between the solar projection line on the horizontal plane and the reference direction.
