

Can i see the comet tonight

Overview

This evening, the comet will be visible close to the western horizon about 45 minutes after sunset. The waxing gibbous moon will be bright, 73%-lit, but that won't make any difference. The challenge tonight will be to find the comet in the bright twilight close to the horizon. When is the best time to see a comet?

From the roughly 10 nights that it should be visible to the naked eye, Monday, Oct. 14, and Tuesday, Oct. 15, are likely to offer the best views simply because the comet will be set against a darker sky. Check back on my page for dedicated viewing guides for both of those evenings.

Can you see a comet soaring across the night sky?

Sign up for the Morning Brief email newsletter to get weekday updates from The Weather Channel and our meteorologists. Now is your once-in-a-lifetime chance to view one spectacular comet soaring across the night sky. Comet Tsuchinshan-Atlas, also known as comet A3, is potentially visible across the U.S. through Oct. 24.

Can you see a bright comet in the sky?

After the end of the month, the comet isn't expected to swing by again for 80,000 years, according to NASA. And at this time there is no other comet projected to be visible in the near future. "Bright comets are very rare and are usually newcomers to the inner solar system," Cooke said. Your unusual chance to see a comet in the sky is here.

Can you see a comet at sunset?

This evening, the comet will be visible close to the western horizon about 45 minutes after sunset. The waxing gibbous moon will be bright, 83%-lit, but that will make no difference since you'll be viewing the comet in a fairly brightly-lit region of the sky — just above where the sun will have recently set.

When is the best time to see Comet Tsuchinshan-Atlas?

There are reasons to believe that the best nights to see comet Tsuchinshan-ATLAS are ahead of us. From the roughly 10 nights that it should be visible to the naked eye, Monday, Oct. 14, and Tuesday, Oct. 15, are likely to offer the best views simply because the comet will be set against a darker sky.

When will a comet appear on the horizon?

The comet will initially appear low on the western horizon in the glow of twilight about 45 minutes after sunset each day starting Saturday, Oct. 12, through the end of the month, Cooke said. The comet can be seen without special equipment but the best view will be through a pair of binoculars.
