

# **Can solar heating tubes generate electricity**

## Overview

---

Naked Energy's rooftop solar vacuum tubes generate heat as well as electricity. They use the same collector for photovoltaic mechanisms and thermal conversion. How do solar panels produce electricity?

Solar panels that produce electricity are known as solar photovoltaic (PV) modules. These panels generate DC electricity when exposed to light. There are a range of technologies which transform the energy from the sun into hot water. In Ireland, the most common technologies are solar thermal collectors, or solar hot water collectors.

Can solar panels heat water?

The output of solar PV panels can be diverted to heat water, but solar water heating is more efficient. This means it will take up much less roof space than PV panels would for the same energy output. Your home could even have both solar thermal and solar PV, to generate the largest amount of renewable energy from your available roof area.

How does a solar hot water system work?

Most solar hot water systems are just designed to provide the hot water you use for bathing, showering and hot taps. Solar water heating systems use panels or tubes, called solar collectors, to gather solar energy. The solar collectors convert the infra-red portion of visible light into heat. They are filled with a mix of water and glycol.

Do rooftop solar vacuum tubes generate heat and electricity?

Naked Energy's rooftop solar vacuum tubes generate heat as well as electricity. They use the same collector for photovoltaic mechanisms and thermal conversion. Vacuum tubes for electricity and heat have many advantages.

What is solar water heating?

Solar water heating (or solar thermal) uses sunlight to heat the water you'll then use in your bathroom or kitchen. Even in cloudy Britain, solar energy can meet more than half of your annual hot water demand. Solar water heating should not be confused with solar photovoltaic (PV) technology, which produces electricity.

How do solar thermal panels work?

Let's dive in! Solar thermal panels, also known as solar hot water systems, utilise sunlight to heat water or transfer heat to a building's heating system, such as radiators or underfloor heating. The process involves a few key components: Solar collectors - The solar thermal panels on the roof consist of collectors.
