

# Can solar power generation be placed on the roof

## Overview

---

The good news is that solar panels can be installed on just about any roof type, but the installation process and mounting hardware might vary from material to material.

**Key Takeaways** Rooftop solar systems are a cluster of solar panels installed on the roof of a building to generate electricity. ☐☐☐☐.

Solar panels are built to work in all climates, but in some cases, rooftops may not be suitable for solar systems due to age or tree cover. How many solar panels can be installed on a roof?

Your roof will need to be large enough to fit a suitable number of solar panels, as there's rarely much point putting just two or three panels up there. The average solar panel takes up 2m<sup>2</sup>, and your installer should leave around 40cm on each side of the array, as well as 3cm between every panel.

Should solar panels be installed on a south-facing roof?

Ideally, your solar panels will be installed on a south-facing roof at an angle of about 30°. These are the optimal conditions for solar panel production. The closer you get to this, the more electricity your panels produce. Solar panels with a larger power-to-size ratio will produce more electricity per square foot.

Can solar panels be installed on a roof?

Photovoltaic panels require direct sunlight to generate energy, so while installing solar panels on the roof it makes sense to remove any shade that may reduce or interfere with sunlight. The majority of the time, the shade comes from neighboring trees or tall structures.

Can you put a solar panel on a thatched roof?

Thatched roofs are not suitable for solar panels. There's no mounting system

designed for thatch, which wouldn't be ventilated well enough underneath the panels and so would rot. And given that thatched roofs already present a fire risk, putting an electrical system on top wouldn't be sensible!.

Will my roof generate solar energy?

Realistically, your roof's solar generation potential will be less than that. It'll likely still exceed your typical household energy needs, but real-world constraints like roof space, sunlight exposure, and equipment specifications play a huge role in your panels' actual generation.

Can a UK roof support solar panels?

As long as your roof is pitched, has enough unshaded space, and doesn't contain spray foam insulation underneath, it should be suitable for solar panels. The large majority of UK roofs are more than capable of supporting solar panels for as long as you need them to.
