

Cheap vs expensive solar panels

Overview

Is a cheap solar panel worth it?

A cheap solar panel isn't worth anything if it breaks without a warranty to replace it. The cost of a solar panel is set by the manufacturer and involves a variety of factors, from cost of production to expected lifetime. Let's break down the factors that go into solar panel costs.

How to choose the best Cheap solar panels?

Price Point (20%): Naturally, the cost per watt is a crucial thing to look at when comparing the best cheap solar panels. Options with lower costs will undoubtedly help you keep your upfront costs down, which is the primary goal when prioritizing affordability.

How much do solar panels cost?

Finding the lowest possible price tag for your solar panel installation might sound like the best way to save money when you go solar, but the payback period of your solar panel system might take twice as long, and your panels may never earn the return you expected. In 2024, the average cost of solar panels is around \$2.86/W before incentives.

Why are solar panels so expensive?

Similar to solar panel efficiency and power, the cost of a solar panel has much to do with its quality. The cheapest solar panels on the market will be of the poorest quality, making them far more prone to breaks, issues and quick aging. The higher the quality of the parts in a solar panel, the more expensive it becomes.

Are solar panels affordable?

Solar panel affordability continues to increase thanks to falling prices, incentives, rebates, and flexible financing options. The solar panel with the cheapest price tag may not be the most cost-effective option in the long term.

Consider efficiency, performance, and warranties when comparing your options.

Do solar panels save money?

The lifetime savings of your solar panel installation depends on where you live and the cost of electricity. A bigger solar panel system usually means a better solar bargain. While solar panel system wattages vary based on several factors, choosing a larger size will typically lower your cost per watt.
