How to connect CPS sc1.5ktl to PV panel?

For CPS SC1.5KTL, SC2.8KTL, SC2KTL, SC4KTL and SC4KTL-O, connect AC wires as follows: Insert utility wires through cable gland. Connect wires according to polarities indicated on terminal block. Connect to PV Panel (DC input) Make sure the maximum open circuit voltage) of each PV string is less than 500V 450V for CPS SC1.5KTL) UNDER ANY CONDITION.

Is Chint grid PV-inverter reliable?

CHINT Grid PV-Inverter is a highly reliable product due to its innovative design and perfect quality control. Such an inverter is used in high demand, grid-linked PV systems. If you encounter any problems during installation or operation of this unit, first check this manual before contacting your local dealer or representative.

How does a PV inverter work?

The inverter converts the DC from PV modules to AC with the same frequency and phase as the AC grid. All or part of the AC power is supplied to local loads, and the surplus supplied to the electricity grid.

How to check the polarity of a PV inverter?

CAUTION! Disconnect supply before replacing fuses. Use a multi-meter to measure the PV strings' cable ends and check the polarity. The positive (+) terminal of cable should match the positive (+) terminal of inverter's DC input.

The negative (-) terminal of cable should match the negative (-) terminal of inverter's DC input.

How to check if a PV inverter is faulty?

Check PV input Current (PV Over current) 2. Restart inverter by recycling both AC and DC switches. Wait for 1 minute between OFF and ON for all energy to discharge. If inverter cannot clear fault, replace inverter. Recommended solutions: 1. Measure voltage at DC terminals in wire-box and compare with reading in Measurement menu.
