

Construction plan for welding photovoltaic panel pile heads

Overview

Are helical piles good for solar panels?

Helical piles and micropiles work well in compression and tension applications and are ideally suited for solar panel installation. What are the differences between drilled shaft and helical piles?

What equipment options are available for their installation?

.

Are helical piles a good choice for solar array anchoring?

Depending on ground conditions, helical piles can often be shorter in length and therefore cost less in installation time and energy consumption than comparable driven piles or drilled shafts. Some manufactures of helical piles for solar array anchoring assert installation rates as high as 500 piles per day.

Why should you choose galvanized steel screw piles for solar panels?

Because they represent a major investment, solar panels must be able to withstand the harshest weather conditions and have a long lifespan. With their durable and solid design, galvanized steel screw piles offer the most cost-effective solution for anchoring solar panels for the long-term.

What type of mounting structure is used for PV panels?

This mounting structure is often used for residential systems. Helical piles. In sites with weak granular soils, helical piles are driven deep into the ground and attached to the PV panels. They can withstand uplift forces caused by the soil expanding or by strong winds as the helixes in the poles keep them fixed in place.

How do I install a solar panel using screw piles?

Before installing your solar panel using screw piles, contact one of our

certified installers so that they can determine the type, amount, and location of the helical (screw) piles to be installed. Depending on your project, they will be able to estimate the costs. Rapid installation Minimal impact to the landscape No excavation.

How do I choose a pile for a solar farm?

The load-bearing capacity needed for the solar farm is another critical factor in selecting the type of pile. Projects requiring high load capacities—such as those with large, heavy solar panels or in regions with significant wind forces—may necessitate the use of concrete or composite piles.
