

Construction techniques for photovoltaic panel piles

Overview

What is a solar pile & foundation?

At Exactus Energy, we specialize in providing thorough solar pile and foundation designs to set you up for success through installation and beyond. Solar pile structures are foundational components supporting solar panel arrays, often composed of durable materials like steel or aluminum.

What is a solar pile structure?

Solar pile structures are foundational components supporting solar panel arrays, often composed of durable materials like steel or aluminum. These vertical supports anchor the panels securely to the ground, ensuring stability and resistance against environmental factors.

How do I choose a pile for a solar farm?

The load-bearing capacity needed for the solar farm is another critical factor in selecting the type of pile. Projects requiring high load capacities—such as those with large, heavy solar panels or in regions with significant wind forces—may necessitate the use of concrete or composite piles.

How do engineers design foundations for solar panels & support structures?

Based on a thorough analysis of the site, engineers design suitable foundations for solar panels and support structures. The foundation design takes into account factors such as soil bearing capacity, settlement, and potential for soil liquefaction or other geotechnical hazards.

What type of mounting structure is used for PV panels?

This mounting structure is often used for residential systems. Helical piles. In sites with weak granular soils, helical piles are driven deep into the ground and attached to the PV panels. They can withstand uplift forces caused by the soil expanding or by strong winds as the helixes in the poles keep them fixed in place.

How to improve the performance of solar photovoltaic systems?

However, it remains vital to develop methods of increasing the performance of solar photovoltaic systems. Solar modules are placed on the roofs of buildings or mounted on solar structures in farms or parks in many countries (i.e., the United States), demonstrating a preference for ground-mount systems .
