Overview

How do I design a grid connected PV system?

This document provides the minimum knowledge required when designing a grid connected PV system. Design criteria may include: Wanting to reduce the use of fossil fuel in the country or meet other specific customer related criteria. Determining the energy yield, specific yield and performance ratio of the grid connected PV system.

What are the design criteria for a grid connect PV system?

The actual design criteria could include: specifying a specific size (in kWp) for an array; available budget; available roof space; wanting to zero their annual electrical usage or a number of other specific customer related criteria. Determining the energy yield, specific yield and performance ratio of the grid connect PV system.

What are the requirements for grid-connected inverters?

The requirements for the grid-connected inverter include; low total harmonic distortion of the currents injected into the grid, maximum power point tracking, high efficiency, and controlled power injected into the grid. The performance of the inverters connected to the grid depends mainly on the control scheme applied.

What is the role of inverter in grid-tied PV systems?

Controllers Reference Frames In grid-tied PV systems, inverter plays a prominent role in energy harvesting and integration of grid-friendly power systems. The reliability, performance, efficiency, and cost-effectiveness of inverters are of main concern in the system design and mainly depend on the applied control strategy.

Are PV systems compatible with the utility grid?

Interest in PV systems is increasing and the installation of large PV systems or

large groups of PV systems that are interactive with the utility grid is accelerating, so the compatibility of higher levels of distributed generation needs to be ensured and the grid infrastructure protected.

What standards should a grid connected solar system follow?

Standards Relevant to Design of Grid Connected PV Systems System designs should follow any standards that are typically applied in the country or region where the solar installation will occur as well as any additional standards specific to the island country where the installation is located.
