How do I design a photovoltaic and solar hot water system?

Provide an architectural drawing and riser diagram for the homeowner showing the planned location for future photovoltaic and solar hot water system components. Space requirements and layout for photovoltaic and solar water heating system components should be taken into account early in the design process.

What is a solar installation drawing?

These drawings serve as the foundational blueprint for the entire solar installation process, providing structural and electrical engineers with essential guidance to ensure successful project execution.

What should be included in a solar PV system diagram?

The diagram should have sufficient detail to clearly identify: Figure 10: 70-Amp Double Pole Breaker. Figure 11: Site/System Diagram. The diagram should include: array breaker for use by the location, size, orientation, conduit size and location and balance of system solar PV system. component locations.

What is a roof mounted photovoltaic system guidance?

The guidance refers only to the mechanical installation of roof mounted integrated and stand-off photovoltaic systems; it provides best practice guidance on installation requirements and does not constitute fixing instructions.

What are photovoltaic panels & how do they work?

They are designed for builders constructing single family homes with pitched roofs, which offer adequate access to the attic after construction. It is assumed that aluminum framed photovoltaic (PV) panels mounted on a “post” and rail mounting system, the most common in the industry today, will be

installed by the homeowner.

Who is required to install a solar PV system?

All installation work must be performed by accredited CEC installers and documentation proving such accreditation must be submitted to the University. Electrical design of the system must be completed and signed off by an accredited solar PV designer accredited with the CEC.
