## Overview

---

How is solar energy generated?

Solar energy - Electricity Generation: Solar radiation may be converted directly into solar power (electricity) by solar cells, or photovoltaic cells. In such cells, a small electric voltage is generated when light strikes the junction between a metal and a semiconductor (such as silicon) or the junction between two different semiconductors.

How do solar cells produce electricity?

Solar cells convert the light from the sun into electricity. Many solar cells can be put together to make a solar panel. Solar cells are made from a material called silicon. – Solar panels are used to produce electricity. They can be found on buildings but can also be used on a solar farm to harvest the power of the sun.

How does a solar photovoltaic plant work?

The operation of a solar photovoltaic plant is based on photons and light energy from the sun's rays. The types of solar panels used in these types of facilities are also different.

How do you generate energy from the Sun?

There are two main ways of generating energy from the sun. Photovoltaic (PV) and concentrating solar thermal (CST), also known as concentrating solar power (CSP) technologies. PV converts sunlight directly into electricity.

Do solar panels generate electricity at night?

Solar panels generate no electricity at night time. Solar panels can't store energy, so you have to use the electricity they generate when the sun is shining. You need batteries to store the energy generated. These are expensive. – Solar cells convert the light from the sun into electricity.

How do people use solar energy?

People now use many different technologies for collecting and converting solar radiation into useful heat energy for a variety of purposes. We use solar thermal energy systems to heat: Solar photovoltaic (PV) devices, or solar cells, convert sunlight directly into electricity.
