Overview

Do I need a drill to install a solar panel?

In order to use these excellent mountings (some of the most secure and economical fittings) you may need to drill into the solar panel frame. Drilling metals is not very easy so care should be taken. Ideally a variable speed drill should be used, but a standard drill can be used in short bursts of 5-10 seconds.

How deep is a drilled shaft pile for a solar array?

Drilled shaft piles for solar array footings can vary anywhere from 6 to 24 inches in diameter and 5 to 30 feet deep, depending on site conditions and other variables. The drilled shaft or borehole is filled with high-strength cement grout or concrete. At times, steel casing or re-bar is used for reinforcement.

How do you anchor a ground mounted solar array?

By Brandon Wronski, Special To Solar Power World Various options exist for anchoring ground mounted solar arrays. These include drilled shaft piles (also called micropiles or caissons), driven piles and helical piers or ground screws.

How long should a drill drill be used for a solar panel?

Drilling metals is not very easy so care should be taken. Ideally a variable speed drill should be used, but a standard drill can be used in short bursts of 5-10 seconds. Any longer and the drill bit will overheat (however this is not typically an issue with the thin aluminium of a solar panel frame).

Are helical piles a good choice for solar array anchoring?

Depending on ground conditions, helical piles can often be shorter in length and therefore cost less in installation time and energy consumption than comparable driven piles or drilled shafts. Some manufactures of helical piles for solar array anchoring assert installation rates as high as 500 piles per day.

Are helical piles good for solar panels?

Helical piles and micropiles work well in compression and tension applications and are ideally suited for solar panel installation. What are the differences between drilled shaft and helical piles?

What equipment options are available for their installation?
