What is Power Systems Engineering?

Power Systems Engineering, also sometimes known as Power Engineering or Aerospace Power Engineering, is a field of electrical engineering focused on designing, implementing, and maintaining electrical power systems in a variety of platforms, as well as every aspect of that power's generation, conversion, transmission, distribution, and storage.

Who is PowerTech System Engineering Limited?

Established in Year 2002, PowerTECH System Engineering Limited (PowerTECH) supply service equipment for power utilities. Since Year 2003, PowerTECH represent Enervac Corporation (Canada) for the territories of Hong Kong SAR and Macau SAR.

When did Power Systems Engineering become its own field?

The historical answer is that power systems engineering became its own field when British physicist Michael Faraday (September 22, 1791 – August 25, 1867) turned his research in electrochemistry and electromagnetism into what would become the core principles behind all electromagnetic technology inventions, starting in the 1820s.

What does a power system engineer do?

Power Distribution varies somewhat by the applicable ecosystem, but overall requires power systems engineers to distribute and maintain the available electrical power from the energy source to end users, stepping down the

voltages to levels appropriate for their facilities, homes, and devices.

Do all power systems engineers have the same skills?

In short, “No.” For the most part, the same core skills are required of all power systems engineers. All power systems engineers deal with power generation, transmission, and distribution. All work with motors, controls, capacitors, batteries, transformers, and other devices.
