

Emerson netsure 701 dc power system

Overview

What is Netsure 701 AO2 power supply system?

NetSure 701 AO2 power supply system is composed of NetSure 701 AO2-T1 rectifier cabinet and PD48/2000DD or PD48/2000DU DC distribution cabinet (optional), applicable for 110V/120V phase voltage and 220V line voltage power grid.

What are the DC positive busbars of Netsure 701 ao2-t1?

The DC positive busbars of the NetSure 701 AO2-T1□NetSure 701 AO3-T1 rectifier cabinet are shown in Figure 3-14. The maximum current of DC positive busbar (1) is 1000A, and the maximum current of DC positive busbar (2) is 2000A. The DC positive busbars and connection terminals of the PD48/2000DU DC distribution cabinet are shown in Figure 3-15.

Does Netsure 701 ao2-t1 have a rectifier cabinet?

NetSure 701 AO2-T1□NetSure 701 AO3-T1 rectifier cabinet is not supposed to be directly connected to the secondary side of a transformer with capacity greater than 800kVA. An extra distribution cabinet should be used between NetSure 701 AO2-T1□NetSure 701 AO3-T1 rectifier cabinet and the transformer for shortcircuit protection.

How many cables can be fed into a Netsure 701 ao3-t1?

One five-core cable (3P + N + PE, for Netsure 701 AO3-T1) or four-core cable (3P+ PE, for Netsure 701 AO2-T1) can be fed into each cable tube. The phase of the cable should be in accordance with the phase of the AC input terminals. AC cable connection Users should add protection switch at the AC input side of the rectifier cabinet.
