

Energy storage and transfer quiz 2

Overview

What is the energy transfer quiz GCSE physics?

This interactive quiz is aimed at GCSE physics students studying types of energy store, energy transfers, energy dissipation, the conservation of energy and energy calculations. Power is the rate at which energy is transferred. The amount of energy usefully transferred in a system determines how efficient that system is.

How energy is stored?

All energy is stored in some way before being transferred between stores. There are many types of energy stores including those which are most familiar to us: Energy must move between these stores and each time energy is transferred there is an efficiency of transfer that is less than 100%.

How do you explain energy transfers?

In order to explain energy transfers, we often rely on energy transfer diagrams and in particular, Sankey Diagrams. These show the amount of energy in Joules that is transferred and into which store they move, or how the energy is distributed between useful and non-useful forms of energy.

What is an example of energy transfer?

For example, an electric kettle heating water. The relevant energy transfer is from the thermal store of the kettle to the thermal store of the water, with some energy dissipated to the surroundings. But you could take it all the way back to how the electricity was generated in the first place. This is beyond the scope of the question.

How is thermal energy stored and transferred?

Thermal energy is transferred by the mechanisms of conduction, convection and radiation. We hope you enjoyed the Energy Stores and Transfers Quiz! Check out the links below to see more quizzes or go straight to the rest of the

Physics Quizzes. Please rate this page! GCSE Level Quiz. Learn more about how energy is stored and transferred.

How do you determine the transfer pathway of energy?

Answer: Part a) Step 1: Determine the store that energy is being transferred away from, within the parameters of the defined system Step 2: Determine the store that energy is transferred to Step 3: Determine the transfer pathway Energy is transferred electrically from the chemical store of the battery to the thermal store of the bulb Part b)
