

# **Energy storage cabinet assembly production line flow chart**

## Overview

---

What is a production flow chart?

A production flow chart is used to illustrate the manufacturing process of a product. It shows the stages, equipment used and quality control checks where you'll check the product to ensure it meets quality expectations. If the quality is lacking or there has been any damage en route, these errors will be corrected before returning to production.

What is a product flow chart?

The product flow chart is a visual representation of that process and can be easily shared. Because of the nature of its simple design, it's also easy to read and understand at a glance. A production flow chart sets up the sequence of the production of a product.

What information is included in the Enphase ensemble™ energy management documents?

This document provides site surveyors and design engineers with the information required to evaluate a site and plan for the Enphase Ensemble™ energy management system. The information provided in the documents supplements the information in the data sheets, quick install guides and product manuals.

Can a production flow chart be redrawn?

A production flow chart is without its problems. For example, if you have to change the production flow chart, you'll have to redraw it. Any small change to one of the steps requires a full rewrite of the document, which is time-consuming and frustrating.

What is a rounded-edged rectangle in a production flow chart?

A rounded-edged rectangle is sometimes used as the start or finish of a process. There are two common types of production flow charts, high-level

and detailed. The former works as a macro view of production planning usually only featuring six to 10 phases or steps and focusing on the major blocks in a process.

What happens if a production flow chart passes?

If it does pass, then you have to package and ship the product. Finally, the last step is to have service support if necessary. That's a simple production flow chart, which is illustrated below. As you can see, the product flow chart makes it quickly digestible and easy to follow, which is the point of having a production flow chart.
