

Energy storage lithium battery protection board module

Overview

What is a lithium battery protection board?

This product is an intelligent lithium battery protection board designed for energy storage applications. It adopts precise detection technology to realize protection against overcharge, over-discharge, over-current and other conditions of the energy storage batteries, ensuring safe and reliable operation of the energy storage system.

Why should you choose a lithium battery PCB Protection Board module?

Easy to Use: The lithium battery PCB protection board module offers hassle-free installation and usage, eliminating the need for complex wiring processes and enabling a simple and fast setup. **Rapid and Safe Charging:** Incorporates an intelligent lithium cell management IC that facilitates fast and secure charging of the battery.

How can Tritex protect a lithium battery?

You can customize the protection requirements of various additional functions for your lithium battery, such as communication function, SOC calculation, SOH estimation, warning function, recording function, display function, etc. Tritex can provide your battery with a professional protection board and BMS.

What is a LiFePO₄ battery protection board?

LiFePO₄ Battery Protection Board: Lithium Iron Phosphate (LiFePO₄) batteries have different voltage characteristics compared to Li-ion or LiPo batteries. LiFePO₄ battery protection boards are specifically designed for these batteries, offering appropriate protection and voltage detection for LiFePO₄ chemistry.

How to protect a lithium battery?

Use special lithium battery protection chip, when the battery voltage reaches the upper limit or lower limit, the control switch device MOS tube cut off the

charging circuit or discharging circuit, to achieve the purpose of protecting the battery pack. Characteristics: 1. Only over-charge and over-discharge protection can be realized.

What is a battery protection board?

Hardware-type protection board: Use special lithium battery protection chip, when the battery voltage reaches the upper limit or lower limit, the control switch device MOS tube cut off the charging circuit or discharging circuit, to achieve the purpose of protecting the battery pack. Characteristics: 1.

Energy storage lithium battery protection board module

Fire Hazard of Lithium-ion Battery Energy Storage Systems: 1. Module ...

Lithium-ion batteries (LIB) are being increasingly deployed in energy storage systems (ESS) due to a high energy density. However, the inherent flammability of current ...
