

Expected ROI of lithium iron phosphate battery project in Oman 2030

Overview

The power end-use segment is projected to expand at a CAGR of 10.8% from 2024 to 2030 as the use of lithium iron phosphate as a raw material has helped resolve issues of consequent explosions and overheating of such batteries.

The global lithium iron phosphate (LiFePO₄) battery market size was estimated at USD 8.25 billion in 2023 and is expected to expand at a compound annual growth rate (CAGR) of 10.5% from 2024 to 2030. An increasing demand for hybrid electric.

Based on application, the market is categorized into portable and stationary. The portable application segment dominated the global market and accounted for more than 50.0% share of the overall revenue in 2023. This is attributed to the high.

The rising number of portable consumer electronics items that deploy batteries has resulted in an increased consumption of rechargeable batteries.

Based on end-use, the market is categorized into automotive, power, industrial, and others. The others end-use segment dominated the market and accounted for over 35.0%.
