Experience Curve Concept

Experience curves have been used for several decades to analyze the cost reduction of a wide range of technologies [66-69] including energy technologies [e.g. 32]. An experience curve describes how unit costs decline with cumulative production. The specific

PV Learning Curves and Cost Dynamics

The cost of photovoltaics (PV) has declined by a factor of 100 over the past four decades, more than any other energy technology. This cost trajectory appears to very closely fit a learning curve, in which a power law is used to related costs to cumulative experience
