## Overview

---

How do I install a fbwc module?

Hewlett Packard Enterprise recommends using a slot that is electrically x8. Remove the slot cover. Save the retaining screw, if one is present. Connect the cache module backup power cable to the module. Install the FBWC module. If installing a P440 or P441 controller board in a low profile slot, remove the controller board air baffle.

Does fbwc need a power source?

The FBWC requires a power source to allow it to write the cache to flash in the event that the power fails. Typically, a large capacitor is used for this purpose. You were correct in understanding that the write cache solution would help performance. However, you just didn't order the right parts. What you ordered was a 512MB chip.

What happens if fbwc module is idle?

The FBWC module is idle, and waiting for backup power. The FBWC module is idle, and backup power is ready. The FBWC module is idle, the backup power is ready, and the cache contains data that has not yet been written to the drives. A backup of the DDR content on the FBWC module is in progress. The current backup is complete with no errors.

Why is my fbwc module not working?

The current backup failed, and data has been lost. A power error occurred during the previous or current boot. Data may be corrupt. An overtemperature condition exists. The current backup is complete, but power fluctuations occurred during the backup. The FBWC module microcontroller has failed.

Where is the fbwc connector located?

The connector is located on the other side of the FBWC module. Immediately after you power up the server, the controller runtime LEDs illuminate briefly in

a predetermined pattern as part of the POST sequence. At all other times during server operation, the illumination pattern of the runtime LEDs indicates the status of the controller.

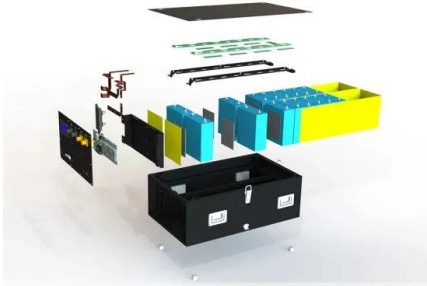

Should I buy a 512MB Flash backed write cache (fbwc) memory module?

So note to anyone else, if you buy a 512MB Flash Backed Write Cache (FBWC) memory module, you need to buy the capacitor as well. @Martyn Actually, they just need to buy part #534916-B21, and they should be fine.

**What is the proper procedure to add FBWC module to ML350 G6?**

The "HP 1G Flash Backed Cache 534562-B21" module was listed as an option by HP for my ML350 G6 with an embedded P410i ZM (zero memory) RAID controller. I bought one on Amazon and installed it. When it boots, the controller does not see the drive array and tries to boot from CD, USB, PXE, and fails to boot. I pulled the cache module and rebooted ...

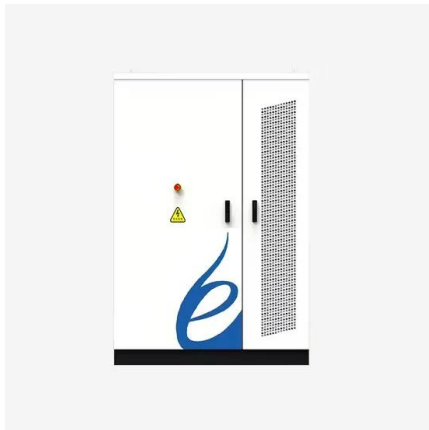

**Flash Backed Write Cache (FBWC) without capacitor pack**

So I then brought the 512MB Flash Backed Write Cache (FBWC) memory module as I was under the impression that with FBWC I would not need a battery. I got this idea from a forum post. "What do you guys think of the choice between 'BBWC' (battery
