

Fengshiyuan Environmental Protection Power Plant

Overview

Does MBR promote green development among China's power plants?

Our main conclusions from this study are that: MBR and GS have positive impacts on efficiency improvement and CO₂ emissions reduction among China's power plants. This conclusion implies that even in China, where CCR dominates in many fields, MBR plays an irreplaceable role in promoting green development among power plants.

Do different types of environmental regulations affect power plant efficiency?

The empirical findings that different types of environmental regulations have heterogeneous impacts on power plant efficiency and CO₂ emissions has important policy implications for China's environmental regulations in the power industry.

Are China's power plants reducing emissions?

Tang, L. et al. Substantial emission reductions from Chinese power plants after the introduction of ultra-low emissions standards. *Nature Energy* 4, 929–938 (2019). Tang, L. et al. Iron and steel industry emissions and contribution to the air quality in China. *Atmos. Environ.* 237, 117668 (2020). National Bureau of Statistics.

How did CCR affect China's power plants?

CCR had no significant impact on it. This may be due to the fact that China's command and control environmental regulations on power plants focus primarily on the installation of desulfurization and denitration equipment, as well as on the emissions standard of SO₂, soot and NO_x.

Does China's continuous emission monitoring system measure emissions from power plants?

This study is the first to develop an inventory of particulate matter (PM), SO₂ and NO_x emissions from power plants using systematic actual measurements

monitored by China's continuous emission monitoring systems (CEMS) network over 96–98% of the total thermal power capacity.

Will strict environmental regulation improve the TCPI of power plants?

The strict environmental regulation is expected to improve the TCPI of power plants. More specifically, when the energy intensity reduction target is 1% above the average value, the TCPI is expected to increase by 0.32% (Shi and Xu, 2018). Column (2) replaces region-by-year and firm fixed effects with region and year fixed effects.
