

Fire protection of air-cooled energy storage box

Overview

In the BESS application each sample pipe extends from the FDA detector to monitor specific areas of interest. It is key to mount the pipe/sample holes.

detectors can be several hundred times more sensitive than traditional point type smoke detectors. The Siemens Aspirated Off-Gas Particle detector.

A patented smoke and particle detection technology which excels at smoke and lithium-ion battery off-gas detection.

Using a unique aspirator, a portion of air is drawn into the sample pipe network which mounted on the lithium-ion battery racks and passed into a detection chamber. The detection chamber is specially designed to be highly sensitive to.
