

# Fireproof certification mark for photovoltaic panels

## Commercial and Industrial ESS

Air Cooling / Liquid Cooling

- Budget Friendly Solution
- Renewable Energy Integration
- Modular Design for Flexible Expansion

## Overview

---

Are photovoltaic panels fire rated?

Effective January 1, 2015, Rooftop mounted photovoltaic panels and modules shall be tested, listed and identified with a fire classification in accordance with UL 1703. The fire classification shall comply with Table 1505.1 of the California Building Code based on the type of construction of the building.

What is the fire classification of a roof mounted photovoltaic system?

1509.7.2 Fire classification. Rooftop mounted photovoltaic systems shall have the same fire classification as the roof assembly required by Section 1505. Different language was approved in the IRC. M2302.2.1 Roof-mounted panels and modules.

Can a PV system be installed on a fire rated roof?

PV system onto a fire-rated roof changes the dynamics of fires that develop. If a fire develops on a roof with a PV system, the presence of the modules can keep the released energy closer to the roof and increase temperatures and heat fluxes to the roof. Thus, fires that could otherwise.

Can a PV module be mounted over a fire rated roof?

The old version of UL1703 provided a fire performance classification for the PV module, and the UL Whitebook provided a description that the module had to be mounted over a fire rated roof of the same or higher fire class. (Class C module over Class C, B, or A roof).

Does a PV system have a fire rating?

New language in the 2012 IBC requires the PV system to match the required fire rating of the roof. The general requirement for roofing systems in the IBC is for Class B and C fire rating. (Class B for assembly occupancy buildings) California has the most Class A and B roof fire rating requirements.

What is NFPA 550 for PV fires on roofs?

A basic fire safety concepts tree (NFPA 550) for PV fires on roofs. Ignition To make sure the production of electricity runs as expected, each PV installation consists of an extensive electrical installation (AC and DC networks with a plethora of electrical components/ devices), in addition to the panels and their mounting system. For ease

## Fireproof certification mark for photovoltaic panels
