

Flow battery system cost vs benefit calculation in Romania

Overview

Are flow batteries worth it?

While this might appear steep at first, over time, flow batteries can deliver value due to their longevity and scalability. Operational expenditures (OPEX), on the other hand, are ongoing costs associated with the use of the battery. This includes maintenance, replacement parts, and energy costs for operation.

Can a battery be used in a PV system in Romania?

As the price for every kWh injected into the network and battery energy storage system (BESS) costs are dynamic, the household and industrial consumers who want to integrate a battery in their PV system may have difficulties choosing between the commercially batteries available on the Romanian market.

Are flow batteries a cost-effective choice?

However, the key to unlocking the potential of flow batteries lies in understanding their unique cost structure and capitalizing on their distinctive strengths. It's clear that the cost per kWh of flow batteries may seem high at first glance. Yet, their long lifespan and scalability make them a cost-effective choice in the long run.

How do you calculate a flow battery cost per kWh?

It's integral to understanding the long-term value of a solution, including flow batteries. Diving into the specifics, the cost per kWh is calculated by taking the total costs of the battery system (equipment, installation, operation, and maintenance) and dividing it by the total amount of electrical energy it can deliver over its lifetime.

Are battery technologies profitable in Romania?

Profitability evaluation for 5 types of battery technologies in Romania. BESSs

costs were obtained from Romanian market analysis. LCB technologies are the most feasible from the examined BESSs. A sensitivity analysis with respect to cost parameters is presented. The variation of capital expenditure has the highest influence on LCOS values.

Are there commercially available batteries on Romanian market?

The analysis presents the commercially available batteries on Romanian market, the technical performances of each battery, the costs involved in this decision, the opportunity to reduce their investment and indicates the most profitable battery obtained after LCOS method is performed.
