

Fuel sources for electric power generation

Overview

What are the different types of energy sources?

The other two are transport and heating. As we see in more detail in this article, the breakdown of sources — coal, oil, gas, nuclear, and renewables — is different in electricity versus the energy mix. Generally, low-carbon sources (nuclear and renewables) account for a larger share of our electricity than our total energy mix.

What is the main source of electricity in the world?

Coal has been the main source of electricity generation worldwide for the last three decades. In 2023, global coal power generation stood at almost 10,500 terawatt-hours. Overall, coal, natural gas, and other fossil fuels accounted for approximately 60 percent of the global electricity production that year.

What percentage of electricity is generated from renewable sources?

In 1990, renewable resources provided about 12% of utility-scale electricity generation. Wind energy was the source of about 10% of total U.S. utility-scale electricity generation and accounted for 48% of the electricity generation from renewable sources in 2023. Wind turbines convert wind energy into electricity.

What percentage of electricity is generated from combustible fuels?

IEA. Licence: CC BY 4.0 Electricity generation from combustible fuels accounted for 57.1% of total OECD gross electricity production (compared with 71.1% for non-OECD). Over the two years 2018 and 2019, global electricity generation from renewable sources such as wind (+11.8%) and solar (+22.5%) registered robust growth.

What is the fuel mix for electricity generation in Hong Kong?

In the overall fuel mix for electricity generation in Hong Kong, natural gas dominates the fuel mix in Hong Kong, in 2020 on set-out basis, at around

48%, followed by nuclear energy and renewable energy accounted for around 28% and coal for around 24% .

What are the top two energy sources in the world?

In the chart, we see the share of global energy that comes from fossil fuels, renewables, and nuclear. The sum of the top two is what we want to increase. Part of this slow progress is due to the fact that much of the gains made in renewables have been offset by a decline in nuclear energy.
