Can solar thermal energy be integrated into industrial process heat?

Integration of solar thermal energy into industrial process heat Solar energy systems can either be applied as the power supply in terms of electrical energy or directly to a process in terms of industrial process heat (IPH). In this review paper, only solar thermal energy systems are studied and analyzed.

What is solar thermal energy application?

Energy is the essential need for the development, modernization and economic growth of any nation in the industrial sector. About 32–35% of the total energy of the world is used in the industrial sector. Solar thermal energy application is an initiative towards the sustainable and zero-carbon energy future.

Are solar thermal systems a good choice for water heating?

Solar thermal technologies can provide high fractions of water heating demand at low capital cost, even in cold climates. They can be used stand-alone or integrated into virtually any type of heating system, regardless of the primary heat source (direct electricity, heat pumps, district heating, biomass, or clean fuels).

Is solar thermal system suitable for industrial applications?

Researchers reviewed solar thermal system for industrial and commercial applications and identified the study flow of the solar thermal system for industrial implementation, and the author concluded that there is very less significant research in low and medium range temperature industrial process heat.

What are the emerging solar thermal technologies?

These emerging solar thermal technologies are: Electrical heat storage (including hot water tanks and compact heat stores, both residential scale and

district heating scale) using the power from solar photovoltaics (on-site and/or off-site).

Is solar energy a viable option for industrial operation heating?

The techno-economic research revealed that the consumption of solar energy for industrial operation heating is not implemented due to economic concerns. However, the benefits of the mitigation of GHG emissions could make it financially more viable and attractive option.
