## Overview

---

The kind of material that the solar panel is made of affects its size and shape. Solar panels come in three different types of material: monocrystalline, polycrystalline and thin-film. For example, monocrystalline is the most expensive and the most efficient option. It takes up less space and is lighter than thin-film material.

Every brand of solar panels has slight variations in their dimensions and weights, according to manufacturing material. Although the weight of.

Other important factors are wattage and voltage/current requirements. A solar system is an array of interconnected solar panels that provide total system power in watts. The more wattage a.

Last, but not least, the size of your solar panel system must match desired electricity output needed, says Martin Desmond, a renewable.
