

Generator air chamber inspection

Overview

Can a robotic generator inspection crawler be used on a generator?

This robotic generator inspection crawler can be used on generators with entrance gaps as narrow as 0.9 inches or 22.86 millimeters. MD&A can provide the customer with time and location stamped high-definition video and still images. We can utilize the MD&A Air Gap-Bot to perform a Visual Inspection, with supreme maneuverability.

Can GE inspect a generator?

GE's line of Miniature Air Gap Inspection Crawler (MAGIC)* robotic inspection devices can be used on generators with entrance gaps as narrow as 0.25 inches. GE can perform robotic inspections for the complete range of small industrial and gas turbine generators as well as for the large fossil and nuclear driven generators.

Can MD&A perform a generator inspection without removing the field?

MD&A's Air Gap-Bot can perform full generator inspections without removing the field. This robotic generator inspection crawler can be used on generators with entrance gaps as narrow as 0.9 inches or 22.86 millimeters. MD&A can provide the customer with time and location stamped high-definition video and still images.

Does GE offer a generator air gap inspection?

GE's offline generator inspection solutions include GE's latest robotic tool technology that can perform a complete generator air gap inspection program with the rotor installed.

Can ABB air gap Inspector be used on a generator?

It can be used in all motors and generators with air gaps of 10 mm and upwards. Unlike conventional inspection devices, which are restricted to turbo/hydro generators with very large air gaps, ABB Air Gap Inspector can be

used on all large synchronous motors and generators with air gaps of 10 mm or more.

What is ABB air gap inspection?

The service provides a visual inspection of the stator core, rotor core and winding without the need to remove the rotor. ABB's in-situ visual inspection service uses a robotic crawler - ABB Air Gap Inspector - to examine the stator core, rotor core and winding of large motors and generators.
