

Generator air inlet temperature on both sides

Overview

What are the requirements for a gas turbine inlet temperature regulator?

The gas turbine inlet temperature regulator has strict requirements for the resistance of the air flow outside the tube. Generally, the operating resistance is required to be controlled below 150 Pa, which requires that the air flow speed should not be too high.

How does a generator cooling system work?

The cooling system requires airflow supplied by a fan, which is either mechanically driven from the front of the generator's ICE or is electrically driven. Cooling systems are designed to provide adequate cooling for full load operation at a specified ambient air temperature typically between 40C° (104F°) and 50C° (122F°).

What is the optimum inlet air temperature for a gas turbine?

Under the gross output of 360 MW and ambient temperatures of 5, 15, and 25 °C, the optimum inlet air temperature of the compressor decreased from 32.0, 31.6 to 28.8 °C, respectively for Scheme C2 to ensure the highest gas turbine load rate and GTCC efficiency. 7.

What is a gas turbine inlet temperature control system?

These systems include methods for intake heating under low loads and intake cooling under basic loads, which can be used to change the intake temperature of the compressor under a variety of operational conditions. The heat exchanger of gas turbine inlet temperature control system is a key equipment.

Does changing turbine inlet temperature increase net power?

For this purpose, based on the energy, exergy, environmental, and economic (4E) analyses, the effects of changing turbine inlet temperature (TIT) on a gas turbine power plant in northeastern Iran were studied. The results showed that

increasing TIT enhanced net power and efficiency, so that increasing TIT about 10 K enhanced net power by 1.7%.

Can a cooling system be used with a generator set?

ibility of the cooling system with the generator set. Besides performance testing, endurance testing is t rejection: from jacket water and charge air coolerfactory provided cooling system will typically account for the entire system, a
